

ON-DEMAND BACK-UP & STORAGE MANAGEMENT SERVICE

Data protection and efficient data storage management are critical aspects of any Enterprise IT objectives. IT managers are fast recognising the fact that such routine but critical functions are best served by outsourcing the tasks to Service Providers that are better placed to perform the job in a resilient, scalable & economical manner.

As part of 1-Net's range of integrated Managed Services, NETarchive and NETstore offer the option of outsourcing these tasks, on a subscription basis.

NETarchive

This on-demand backup infrastructure consists of a high performance disk-staging storage system connected to a Master Server running Veritas NetBackup and supported by an extremely robust tape library. Although the service is provisioned from a central infrastructure, it supports customisable back-up policies to meet varying requirements. In addition, each individual customer will be able to maintain their privacy and confidentiality as each will have their own volume pool and tapes assigned. No customer will be sharing the same tape.

Accordingly, our customers are able to enjoy the latest back-up technology without incurring hefty upfront investment.

NETarchive is a fully managed back-up solution that includes

- Back-up verification and recovery service
- Tape Media Cloning service
- Offsite Tape Storage service
